Simple everyday cleaning. Specialist traction.

Thank you for choosing PawSafe Domestic. Your flooring is designed to offer enhanced grip for dogs while remaining practical to maintain in a busy household. Conventional vacuuming, manual mopping and gentle hand scrubbing are suitable cleaning methods.

Everyday cleaning

Vacuum or sweep: Remove grit, dust and pet hair regularly with a soft floor head or soft-bristled broom. Use vacuum equipment suitable for hard flooring.

Manual damp mopping: Use a clean, soft mop or micro-fibre mop with lukewarm water. If required, add a suitably diluted, pH-neutral cleaner suitable for LVT. Rinse away cleaner residue with a clean damp mop and allow to dry.

Spills and pet accidents: Clean promptly with a damp cloth and, where needed, an appropriate cleaner. Do not leave standing water on the floor.

Stubborn marks: You can gently scrub by hand using a soft-bristled brush, soft cloth or non-abrasive pad. Use appropriate cleaner, rinse afterwards and avoid unnecessary force.

Manual cleaning is fine - powered mechanical mopping is not recommended.

Why we advise against robotic mopping

Following a small number of customer reports and our ongoing in-house investigations, we have observed changes in surface feel at some installations where robotic mops have been used. Repeated powered mopping action may polish the textured surface or affect surface residues, potentially reducing traction. The precise cause has not yet been conclusively established. As a precaution, we recommend avoiding robotic mopping functions on PawSafe Domestic.

This advice concerns powered wet-mopping action. Robotic vacuuming in vacuum-only mode may continue where the equipment is suitable for hard flooring and its wheels and brushes are clean.

After installation

Keep the floor free from wet cleaning or standing water for at least 72 hours after installation, or longer where specified by the adhesive manufacturer or your installer. Avoid heavy traffic during adhesive curing.

Cleaning methods and products to avoid

PawSafe Domestic does not require complicated care. To help preserve its specialist traction surface, we recommend avoiding the following:

- Robotic mopping functions, particularly rotating, vibrating or oscillating powered mop pads.
- Powered mechanical scrubbers, buffers and polishing equipment that repeatedly work the floor surface.
- Abrasive cleaning materials, such as wire brushes, coarse scouring pads and aggressive abrasives.
- Steam cleaners, floor wax, polishes, gloss enhancers and unauthorized surface coatings.
- Strong solvents, highly acidic or alkaline cleaners and undiluted disinfectants unless specifically approved for the product.
- Excess water, prolonged soaking and very hot cleaning water.

Protecting your flooring

Remove grit regularly and use suitable non-staining furniture protectors. Certain rubber-backed mats may dis-colour vinyl floors. We recommend Turtle mats. Do not drag heavy furniture across the flooring.
